

Library Management System

by: Emily Weed

A Brief Overview

The Library Management System is a web-based application designed to facilitate the efficient management of library resources and enhance user interactions. The system serves as a centralized platform for library patrons and staff, enabling patrons to search for media, check availability, borrow and return items, and manage their accounts.

Key Functions

- **Search and Catalog Management:** Users can search for books, magazines, and other media, checking their availability in real time.
- **Account Management:** Patrons can create and manage their accounts, keeping track of borrowed items and due dates.
- **Media Transactions:** Simplified processes for borrowing and returning items, along with overdue management.
